EDUCATION

The University of Texas at Austin | Austin, TX

Expected Dec 2027

Master of Science in Data Science

The University of Texas at Dallas | Richardson, TX

May 2025

Bachelor of Science in Computer Science

EXPERIENCE

Comerica Bank | Frisco, Texas

May 2025 – Aug 2025

Software Developer Intern

- Delivered 10+ Salesforce enhancements across full SDLC environments with zero rollback incidents by leveraging Bitbucket and Copado CI/CD pipelines to manage and deploy changes reliably.
- Reduced manual processing time for an enterprise-scale user base by expanding a complaint management system with automated priority-based due dates and structured documentation intake.
- Resolved scope ambiguities and clarified requirements across multiple JIRA stories by collaborating with product managers, QA engineers, and business stakeholders throughout 5 Agile sprints, ensuring zero missed deadlines.

PROJECTS

NextFlick – Full Stack Movie Recommender System

May 2026

- Engineered a content-based recommender system using LLM-generated text embeddings and cosine similarity with Pandas and NumPy across a dataset of 9,000+ films, delivering instant recommendations.
- Developed and deployed a REST API with FastAPI on Render, enabling seamless HTTP communication between the recommendation engine and frontend client.
- Built and deployed an interactive React web app on Vercel that displays the top 10 movie recommendations in real time, reducing personal movie search time by 60%.

ForkCast – AI Recipe Generator

Dec 2025

- Improved meal discovery by building an AI-driven React web application that integrates Gemini AI to dynamically suggest personalized meals based on user-provided ingredients.
- Lessened UI lag and refined responsiveness by implementing asynchronous API requests and React state management, enabling seamless real-time recipe updates without page reloads.

Grader Assignment System – University Capstone Project

Jan 2025 – May 2025

- Built frontend features in React for a full-stack web application that automated the grader assignment process across fragmented university systems, helping reduce manual administrative work by 70%.
- Enhanced hiring manager workflow efficiency by designing an intuitive React UI with grader-course matching features, iteratively refining layouts based on feedback to enhance usability and transparency

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, HTML, CSS, C++, SQL, R

Frameworks/Libraries: React, Node, FastAPI, Tailwind CSS, Pandas, NumPy

Tools: Git, GitHub, Jira

Concepts: Data Structures, Algorithms, OOP, REST APIs, CI/CD, Agile, SDLC, Full-Stack Development
